

1ST Cranbrook Custom Homes

In a great room featuring a spectacular wood-paneled ceiling with rough, reclaimed wood beams, the limestone fireplace is a touch of refinement that perfectly balances the ceiling's rustic details. The fireplace mantel is made of real limestone; as such, it has the rich, unique texture and look of true limestone that can't be replicated by manufactured materials. The limestone, combined with the steel surround, has a distinct beauty in itself — the clean lines and simple design are constructed with the perfect amount of detail and rich beauty, without being overwhelming.
